S u b j e c t: FW: ND brine release
Attachments: [Williams County-Final.pdf](#)

Dear RRT members and other interested parties,
Some of you have been asking about another spill—a brine spill—that occurred up in ND earlier this month. The amount released from this spill was just recently updated in the NRC report. For further information, FEMA forwarded the information below along with this news release that was put together by the North Dakota Department of Health.
V/R,
Kathie

Kathleen M. Atencio, CAPT USPHS

Subject: RE: ND brine release
NDdoh has had personnel on site since the incident occurred on January 7th. They just received notification late yesterday that the company was now reporting approximately 70,000 barrels of produced water and unknown amount of oil has been released. Since remediation efforts began, approximately 64,000 barrels of water have been extracted from Blacktail Creek.
NDdoh indicates the release does not present a threat to public drinking water or human health at this time. If that changes I will let you know.
Attached is the press release issued by the NDdoh this afternoon.
Let me know if you have any other questions.
